

BEN LOWRY

SOFTWARE ENGINEERING PROJECTS

QUIZ-ard - A quiz game built in Vanilla JS HTML and CSS that pulls questions from the OpenTrivia API to display them on the board via buttons and checks the questions answered based on the players' guess.

<https://quiz-ard.netlify.app/>

BUG-CATCHER - A grid-board style game built with React and Airtable. The object of the game is to traverse the board trying to "catch" bugs, when you land on a tile that contains a bug, you are routed to the bugs information - pulled from the Airtable API. styling done in SCSS.

<https://bug-catcher.netlify.app/>

THE CUB CLUB - A Full-stack group project utilising Express, React.js, Websockets, Sass - A multiplayer game that allows players to send mail and chat with each other all on one screen.

<https://the-cub-club.herokuapp.com/>

SYSPAIR - A Full-stack app utilising Flask, Next.js and Tailwind A programming language comparison app that lets you view aggregated survey data for specified Languages in real time.
